路由传参

```
路由传参组件
```

组件传参

```
新建一个组件bus. vue,内容如下:
import Vue from "vue";
export default new Vue();
传递参数组件
import Bus from '../../bus.js';
Bus. $emit('cid', this. titleLists[index].cid);
接收参数组件
import Bus from '../../bus.js';
methods: {
 getDetail() {
   var _this=this;
   Bus. $on('cid', function(cate id) {// 监听first组件的cid事件
     if (cate_id<17) {
       let apiurl = '/v1/article/article';
       var headers= this.mainConfig.httpConfig().headers;
        _this.$http.get(_this.mainConfig.apiUrl + apiurl,{
         headers,
         params: {
           cid:cate id
         }
       })
         . then((response) \Rightarrow \{
           this. detailLists=response. data. content;
         });
     }
   });
```
